

Prepare for your science quiz!

Please study these parts of a plant. You will be asked to write each part's job. You will also need to label the parts on the plant.

Roots

Roots hold a plant in place. They also get water and nutrients from the soil.

Stem

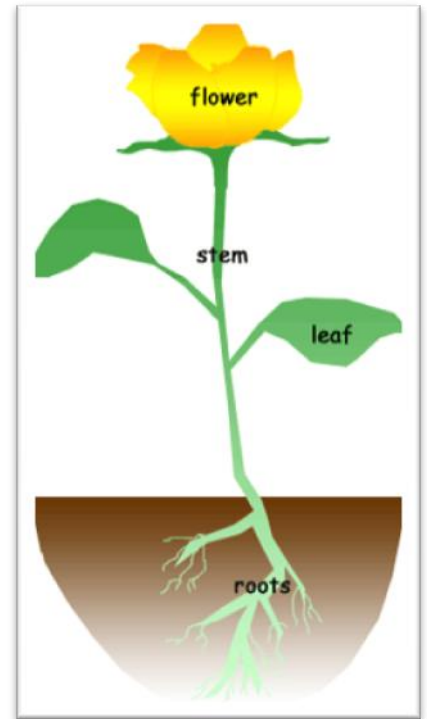

A stem holds up the leaves and the flowers. It carries water and food to the rest of the plant.

Leaves

Leaves make food for the plant using photosynthesis.

Flowers

Flowers make seeds for the plant.

Helpful study tips:

- Have someone at home ask you to name each job for the different parts of the plant.
- Make flashcards – name the part on one side, tell the job on the other.
